Robust Wireless Requires Fiber Connectivity

Wires still matter

In fact, advanced wireless coverage and speeds requires more fiber lines.

“Actions taken today will affect what kind of broadband networks the city has in ten years. And, in ten years, whether it has faster, cheaper, better broadband networks will affect everything that state and city does.”

- Blair Levin, Brookings Institute

Moderated Discussion w/ Q&A

A group of people is sitting on a lawn in a park, surrounded by trees and a brick building in the background. The scene is bright and sunny, with a clear blue sky and scattered white clouds. The people are sitting on blankets or mats, and some are talking to each other. A bicycle is parked in the foreground on the left. In the background, there are several trees and a brick building with a fence in front of it. A car is parked on the street behind the lawn.

Thank You!
